

NEW ISOBUS TXB MODELS FOR SM16

SeedMaster is excited to announce the release of ISOBUS controlled tool bar (TXB) machines. The new ISOBUS system has recently entered our product line and is being fitted onto SM16 tool bar (TXB) machines.

ISO, is the International Organization for Standardization (ISO11783 Standard). BUS, is the generic term to describe the physical connection between a set of electrical components. This ISO system allows for interconnectivity between different manufacturers without changing harnesses and monitors. Using an ISO compatible tractor equipped with an ISO VT monitor allows for less electronics, clutter, and monitors to learn and operate.

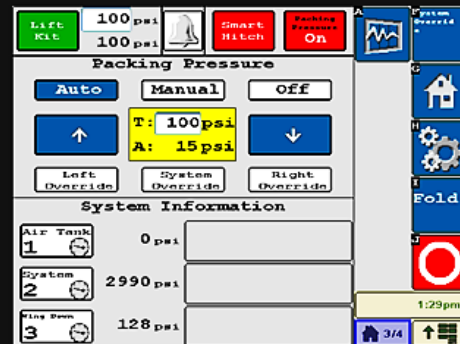

"Back up your ISO compatible tractor equipped with an ISO VT to your SeedMaster ISO TXB or SXX and have instant control of your SeedMaster machine."

ISO TXB Feature Set:

- SmartHitch Control
- Packing Pressure Control (HYDR or PFS)
- Matrix Wing Folding Control
- Fan, Pressure and Weight Display Area

Benefits:

- Less Cab Clutter
- One monitor to learn
- Less cost
- Job info from ISO VT for example John Deere's 2630, Case's Pro 700, New Holland's Intelliview, Top Con's X30 and many more.....

SeedMaster is offering upgrade kits specific to tool bar machines (TXB) from 2015 back to 2011 model years. Please contact your SeedMaster Certified Dealer for model specific pricing and availability.

Note: ISOBUS upgrade kits are for toolbar (TXB) models only.

We thank you for maintaining your SeedMaster equipment. If you have any questions, please contact your SeedMaster Certified Dealer directly.
